

Section 9 Appendix

A-1

$\forall \langle e, w(e) \rangle \Rightarrow$

A-2

where $\bar{u}_H = 5000 - 0^2 = 5000$
 $\bar{u}'_H = 10000 - 50^2 = 7500$
 $\bar{u}_L = 5000 - 2 \cdot 0^2 = 5000$

range of e_H values which support PBE (separating)

A-3

A-4

$10,000 - (31.6)^2 \approx 9000$

With dominance refinement
 $\mu(H|e > 50) = 1$
